

COMPANY

A2TRADE was incorporated as a private limited liability company limited by shares, duly incorporated in 2018 under the laws of Estonia and Gibraltar. The company incorporated in Estonia and Gibraltar to obtain virtual currency and hot wallet licenses in both jurisdictions and banking for its exchange clients within Europe. The main headquarters of the company will be based within Gibraltar, and its regulation will be based on a Distributed Ledger Technology (DLT) Gibraltar License and Payment Institution (PI) License under the FCA in the UK.

PROJECT

We will create a Hybrid Crypto Exchange/Broker, with all payments (withdrawal and deposit) seamlessly integrated with a shared account system in numerous fiat and Cryptocurrency E-wallets. We will integrate the latest trading platforms, tools, and apps into a single platform for all your trading and investing needs, powered by the blockchain technology. The platform will support trading and exchange of the following assets: Stocks, Bonds, Indices, Forex, Cryptocurrency CFDs, Cryptocurrencies, and physical assets including gold and diamonds.

SOLUTIONS WE OFFER

A2TRADE is pursuing the ambitious goal of creating a hybrid broker and exchange with automation at every step. A2TRADE will provide solutions to the following problems in the online trading industry. We will solve the many problems users have with fragmented trading platforms and broker account architectures. We bring to the market significant innovations which solve key market problems:

Too many accounts and platforms

We will provide a consolidated platform for all your investing, trading, and exchange needs. Eliminate the need for a separate broker and exchange accounts.

Lack of payment options

We will add our own Payment Service Provider to the platform based on our users' requests and it will be built seamlessly into the trading and exchange platform.

Lack of leverage, margin and hedging

Addition of Cryptocurrency CFDs with 3:1 leverage and Forex CFDs with 100:1 allows members to utilize margin, short selling, and hedging. Investors and traders can benefit from falling Cryptocurrency prices by utilizing short selling.

Lack of flexibility with accounts

Provide shared wallets between all trading packages and support instant conversion between any fiat and virtual (crypto) currency wallet. All e-wallets are accessible from all trading and exchange platforms.

No Risk management

Our exchange will provide auto-trade features for stoploss and stoplimit orders, with maximum draw-down settings on all trades.
